Office Action Summary

Note that the original set of claims did not have a number 8 claim. Therefore in accordance with 37 CFR 1.126 original claim 9 has been numbered "8", original claim 10 has been renumbered "9", etc..

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, drawn to a Gm cell, classified in class 330, subclass 253.
- II. Claims 19-26, drawn to an amplifier arrangement with GM adjusting means, classified in class 330, subclass 2.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require the current mirror connected with the error amplifier as is required of the subcombination. The subcombination has separate utility such as for use as a stand alone amplifier.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
